

MORE TESTIMONIALS AND CASES THAT USING WMQ TECHNIQUES

Slipped Disc

Nature of problem: Slipped Disc at L3/4, L4/5 and L5/S1.

- Patient is an active sports person since young. Due to past injuries, developed slipped disc at L3/4, L4/5 and L5/S1. Problems on and off for many years. Usually when pain occurs, rest and physiotherapy will ease the pain.
- December 2004, patient has a bad pain. In the morning, can't get off the bed. Admitted to Damansara Specialists Hospital. Condition is so bad that the Orthopedic suggest immediate surgery due to the "foot drop" at the right leg. The right leg total lost of motor control. The nerves have been pressed against and condition is irreversible.
- Patient decided to wait for 1-2 weeks.
- After 2 weeks of hospitalization, the condition did not improve.
- Patient decided to try alternative medicine treatment due to fear of possible side effect on surgery.

Name of patient: Rosli bin Abdul Razak

Gender: Male

Age at the start of treatment: 40

Current age: 43

Treatment period: four sessions over one and half month.

Treated by: Master Tan Soo Kong

Treatment records:

Master Tan Soo Kong treated the patients four sessions over one and half month.

- Session #1 – patient need to use crutches; hardly can walk; right leg can't move. Master Tan treated him for about 20 minutes. Patient felt warm and comfortable at the effect area and the pain reduced slightly.
- Session #2 – after first session, patient felt slight improvement and the right leg can move slightly and gain back sensation. Treatment for second session last about 20 minutes. Pain further reduced.
- Session #3 – after second treatment, patient could stand and walk slowly without crutches. Treatment for third session last about 20 minutes.

- Session #4 – after third treatment session, patient felt he is back to normal. However, to cast the condition, fourth session was done. This is the last treatment session for the patient.
- After the four sessions of treatments, patient is free from problem since January 2005. He even able to take on a physically demanding career in Middle East.

DIAGNOSTIC IMAGING DEPARTMENT
 RADIOLOGICAL REPORT

Name : ROSLI BIN ABDUL RAZAK Date: 24/12/2004 10:22
 Mrn : 111150 / 7 Age : 40 YEARS
 Doctor: DR ROZMAN BIN MD IDRUS Sex : M

MRI LUMBAR SPINE:
 T1W and T2W 5mm sagittal sections.
 T2W 5mm axial sections.

There are degenerating discs at the levels of L3/4, L4/5 and L5/S1.

A left postero-lateral disc prolapse is seen at the level of L3/4 indenting on the adjacent lumbar spinal theca. Part of the prolapsed disc is seen to encroach on the neuro foramen on the left.

A left postero-lateral disc prolapse is seen at the level of L4/5 indenting on the adjacent lumbar spinal theca. Part of the prolapsed disc is seen to encroach on the neuroforamen on the left.

A left postero-lateral disc prolapse is seen at the level of L5/S1 indenting on the adjacent lumbar spinal theca. Part of the prolapsed disc is seen to encroach on the neuroforamen on the left.

The rest of the lumbar inter-vertebral discs are normal in signal intensity and appearance.

The lumbar vertebral bodies are normal in signal intensity.

IMPRESSION:

1. L3/4 left postero-lateral disc prolapse.
2. L4/5 left postero-lateral disc prolapse.
3. L5/S1 left postero-lateral disc prolapse.
